

## **Post Implementation Evaluation Report**

### **Campus Wireless Infrastructure – University of Kansas Medical Center**

Project Dates: 1/2004 through 1/2008

Project Cost: \$314,851

#### Project Objectives

The objective for this project was to provide secure wireless access to university network resources for faculty, staff and students. Students and faculty have asked for wireless connectivity to utilize different technologies in the classroom as well as to give students the flexibility to access the network from locations other than the defined student study areas and kiosks. This has now expanded to the need for access in clinical areas and other administrative areas to allow expanded access to the university network via laptops, handhelds and other wireless devices.
